 Supplementary listing

SETS OF ALTERNATING EXPRESSIONS: "Some ... others", etc.

[Each set is marked by one or more of the particles MEN, DE classified as alternating particles in the GRAMCORD Database. The other expression occurring with MEN or DE is put in one of three classes in column 3, either as R: the Relative Pronoun, as A: the Article, or as O: Other. Column 2 is the antecedent or referent of that word, that which is alternately described by the series of statements in the set.]

1. The first item in the list is sometimes not marked with MEN.
2. The most commonly occurring "Other Words" discovered are ALLOS (24 times), ETROS (10 times), and TINES (5 times). They occur alone with MEN, DE or in series with either the Relative or the Article. Sometimes they occur together in the same list. Not all possible examples of such alternating expressions are identified as such. In a sense every MEN and DE clause carries this "balancing" construction. Only those where the sense seems clearly to call for the "some ... other" construction have been so listed.
4. 1 Cor. 12.28 is questionable. It does not seem to fit the "some ... other" pattern. The numbered list following is not an alternative to, but a description of, those referred to by OUS.
5. The only other example without DE in the alternative list (found twice in parallel passages, Mk. 4.4 and Lk. 8.5) are clearly alternative, with KAI becoming the alternating particle.

Summary: Nominative to Accusative 7
 Genitive to Accusative 4
 Genitive to Dative 1
 Dative to Nominative 1
 Dative to Accusative 1
 Accusative to Dative 1

Note on Acts 10.36:
 If the sentence as it was begun would have put TON LOGON in the
 nominative as subject of an elliptical sentence (cf. NASB), then this is a
 case of inverse attraction.
 If LOGON is understood as in apposition to RJMA (v. 37) and IJSSOUN
 (v.38), then no attraction is involved.

The total number of matches for file SORTLIST.REL with the field specification of Field 7 = n* is = 60

Summary: Explanation of "ad sensum" agreement:

R = Real or Natural agreement vs. Grammatical.
 Rg = non-agreement in gender 18
 Rn = non-agreement in number 7
 Rgn = non-agreement in both 2

W = A "word" or "name" which means ...

(RUMA or ONOMA understood as antecedent)
 Wa = 0 ESTIN
 Wb = 0 ESTIN MEGERMJNNUOMENON
 Wc = 0 ESTIN LEGOMENOS
 Wd = 0 LEGETAI
 We = 0 LEGETAI MEGERMJNNUOMENON
 Wf = 0 ERMJNNEUTAI

Note: This expression also occurs where agreement is normal; e.g., Mt. 1.23

9 PS = 0 ESTIN agrees with predicate substantive rather than true antecedent.
 7 GT = Neuter points to general notion; "thing".
 6 AI = Neuter points to abstract idea.

Note: Those in PS and most of those in W involve the phrase "that is" (cf. 0 ESTIN which, like TOUT ESTIN, means "that is" (cf. our abbrev., i. e., [Latin id est, "that is"]. This seems very often to be a set expression and is neutral in gender, although it sometimes is made to agree in gender with its antecedent. Also, the neuter gender itself is often used for that which is abstract or general. Cf. A/G 588, ATR, 411-2, 713-4.

Notes:

The first six are classified as adjectival clauses serving as continuative (AC), connecting links with the previous sentence. Sometimes the new sentence is imperative.

The other three are classified as alternating relatives (LR). Such sets may connect words, phrases, or clauses. In these instances imperative clauses are alternatively connected.

(1) MK	12 5-5 *OUS MEN	PAP LR	some	ALIOUS S N <2
(1) MK	12 5-5 *OUS DE	PAP LR	others	ALIOUS S N <5

Notes:

Again these two are classified as alternating relatives, and they are connecting two adverbial participles; there is no relative clause involved at all.
